

CJ LOGISTICS SOLUTIONS

CJ Logistics Solutions are a recruitment company specialising in temporary HGV driver contracts. Recently they have expanded into other aspects of logistics recruitment such as forklift drivers and warehouse workers.

CHALLENGE

CJ Logistics was established in 2015 and have grown exponentially over the last few years. Unfortunately, their IT hadn't grown with them. This had resulted in the company running on outdated and improperly implemented systems. Costing the business valuable resources and forcing the Managing Director, James Stenton, to dedicate his time to fixing continuous IT issues and setting up new users rather than running his business.

SOLUTION

Bluebell IT Solutions made several changes to CJ Logistics's IT infrastructure to improve their overall IT management and address known issues:

- Data and email migrations to Microsoft 365
- Moving from a Personal OneDrive to a Business OneDrive
- Signed up for monthly support

RESULTS

By opting into monthly support, James was able to regain his time back, he is now able to concentrate on leading and running his business. CJ Logistics has seen an increase in productivity and staff morale by providing better equipment and IT support to its staff. As well as saving staff time by switching to Outlook and Exchange Online. Moving to the cloud has given CJ Logistics the ability to adapt quickly to changing work environments, keeping their competitive edge.

CONCLUSION

Partnering with Bluebell IT Solutions, CJ Logistics has successfully streamlined their IT infrastructure. Switching to business designed software has reduced staff wait time and increased productivity. Bluebell IT Solutions has given the Managing Director more time to lead, focus on and grow his business.

"I get a lot less questions about IT now... knowing that you can just raise a ticket... and usually within an hour we've had someone looking at it. [Bluebell IT has] given me a lot more time back."

Are you an expanding company that needs to upgrade its IT infrastructure to better suit your requirements?
