

BIOLUMINUX CASE STUDY

A high-growth British research organisation conducting innovative clinical trials for the UK and US pharmaceutical industry.

AT A GLANCE

CHALLENGES

- Lack of IT expertise
- Site setup and expansion
- Synergy between US and UK clinical sites

BENEFITS

- Access to IT professionals
- Research Industry Compliance
- Endpoint Manager
- Enhanced Data Protection
- Network Installations

OBJECTIVES

With Bioluminux rapidly expanding into new markets, Dr Lawrence, the Managing Director of Bioluminux, wanted to outsource the IT for scalable operations across their international research sites.

This strategic move would allow Dr Lawrence to concentrate on activities such as securing new projects and engaging with on-site staff during trials.

Dr Lawrence also wanted to secure confidential patient data in compliance with industry regulations.

SOLUTIONS

Given the stringent data protection regulations in the clinical research sector, Bluebell IT stepped in to fortify Bioluminux's infrastructure, deploying Microsoft Endpoint Management for seamless remote technology minimising downtime across all locations.

Dr Lawrence credits much of Bioluminux's success to Bluebell's support; ensuring smooth IT growth on the journey from start-up phase to an international research firm with 3 UK sites and 2 in the US.

"Bluebell IT does a fantastic job."

"Without IT we can't function, and I can't put a price on that."
